Owner's Full Name : Amar Shan.  
Builders Full Name : Dave Giesbrecht.

The first flight of this beauty has been anticipated for just about 2 years.  
The time is drawing near !

---

From the BVM Website : The Bobcat : A Refined ARF Sport Jet for 11 to 18lb thrust turbines - grass field capable.

The BobCat is now an all composite molded ARF that can be flight ready in a minimum amount of assembly time. It is the same size as the original BobCat with many advanced features of the larger KingCat. Its slow flight and landing characteristics have been enhanced with the huge flaps and generous control surfaces.

The BobCat Composite will do it all with less expensive 8 or 9 channel radios and does not require a gyro. The BobCat Composite is the easiest-to-land jet in our inventory - just watch them at the shows.

---

We're looking forward to seeing this one fly !!!
